WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Roof plate: 3 mm sheet 750 x 650, the outside of the top frame.

Cut a 150 hole in the centre for the flue.

Drill 14 holes 9 mm, 12.5 in from the edge, to match the frame:

five along each side, two more at each end.

Weld twelve M8 studs on top for the economizer base, 15 in from

its edge (mark them from the economizer base plate).

Roof board: 50 mm fibre board 594 x 494 with a 150 hole, pinned

under the plate with stainless pins and speed washers, centred.

Fit: on a 12 mm ceramic rope gasket on the frame; 14 M8 bolts,

nuts under the frame. The board fits inside the wall lining.

Check: the roof seats on the rope all round; no light shows.
