WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make three from 40 x 40 x 5 stainless angle: one 112 long (back wall)
and two about 190 long (the two end walls); cut each to fit.
One leg lies flat on top (the coil sits on it); the other hangs down.
Weld each to the inside of the shell with stainless rod, square to
the wall, before the lining goes in:
back wall: centred, top 410 above the inside of the floor board;
left end: 105 in front of the centre line, top about 423 up;
right end: 105 in front of the centre line, top about 436 up.
(The coil climbs 40 mm a turn, so the three tops differ.)
Each top sits just under the lowest turn of the coil: set the
final height with the coil in place and shim if needed.
Check: the coil rests on all three, level within 3 mm.
