WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

A square frame of 25 x 25 tube, 300 x 300 outside, mitred and welded, on four legs of the same tube, 70 long.

Weld a 60 x 60 x 5 pad under each leg so the stand does not sink into the floor board. Overall height 100.

The 300 x 300 cast grate sits loose on the frame; its top is 120 above the floor board.

Fit: stand it in the middle of the floor, under the coil. The space under the grate is the ash pit; the air inlet opens into it.

Check: the grate sits flat and does not rock; there is 280 from the grate top to the lowest turn of the coil.
