WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two: 6 mm plate 80 wide x 100 tall.
Drill a 26.0 hole for the coil tail, centred across, 35 above the bottom edge: a sliding fit on the 25.4 tube.
Drill four 7 mm holes for the M6 studs, 56 apart across and 76 apart up, centred on the plate.
Weld four M6 studs to the shell round each slot to suit.
Fit: pack the slot round the tail with 12 mm ceramic rope, slide the plate over the tail end, and nip the nuts so the rope seals but the tube can still slide as it grows when hot.
Fit the plates before the unions go on the tail ends.
Check: the tube slides in the plate by hand.
