WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

About 2.6 m of 3/4 in pipe and six elbows, screwed together:
from the pot's half coupling 60 to the right, then down 450,
across 70, up 350 to the crown, back toward the trailer end,
across to the centre line behind the deck, and down to 80
above the ground, open end pointing down.
The U holds 350 of water (a loop seal): steam in the pot cannot
blow out of the overflow while the vent carries a surge.
Drain plug under the U: drain the U with the pot (frost).
Trap stay: 40 x 6 bar from the pot's clamp band to the down-leg.
Rear clip: 6 mm plate on the rear rail end (2 x M8), arm and band.
Check: pour water in the pot above the mark: it runs out at the
ground; the outlet is behind the trailer, never at the operator.
