WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Baffle: 1.5 mm 304 stainless sheet 644 x 471, corners R5. It fills the lined box from end to end and from the front lining to 73 short of the back lining: the gas turns up through that gap.

It lies flat 72.75 to 74.25 above the roof plate, between the two layers of the bank: gas enters under it at the front, crosses the bottom layer, turns at the back, crosses the top layer forward.

Spacers: cut each 6 mm spacer bar in two, 20 below and 23 above the baffle; the baffle is clamped between them, no fixings.

Fit with the bank: bars, bottom layer, lower spacers, baffle, upper spacers, top layer; then lower the box over it all.

Why: without it the gas creeps past the tubes at 0.1 m/s and the design makes 60 %, not 68 % (STR-CAL-001 v0.5).
