WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Floor: 50 mm board 694 x 594 (the inside of the shell), laid first.

Walls: two layers of 25 mm blanket, rigidised, 907 tall, standing on the floor board. Cut the back and front 694 long and the two ends 494 long, so the ends fit between them.

Roof board: 50 mm board 594 x 494 with a 150 hole in the centre, pinned under the roof plate (it comes off with the roof).

Cut through the front: door opening 300 x 240 and air inlet

160 x 60, lined up with the shell openings.

Cut through the right end: the two tube slots, 40 wide.

Slot each wall where the coil brackets pass: bracket size plus 1.

Hold the blanket with stainless pins welded to the shell, about

250 apart, and speed washers. Wear a mask: see the safety stops.
